

Configuring Eudora 7.1 (Windows) for Commander 360 email

1. Open Eudora and select **Tools > Options**
2. Click the **Getting Started** tab
3. Configure the fields as shown below. Do **NOT** click **OK** yet.
 - a. **Real name** - Provide a name for the account
 - b. **Email address** - Your Commander 360 email address
 - c. **Mail Server (Incoming)** - Must be **pops.onestream.com.au**
 - d. **User Name** - Your Commander 360 email address
 - e. **SMTP Server (Outgoing)** - Must be **smtps.onestream.com.au**
4. Check **Allow Authentication**
5. Select **Tools > Personalities**
6. Select **Tools > Personalities**
7. Right click the **Personality** and select **Properties**
8. **Generic Properties** tab is used to set **SSL** options for sending mail (**SMTP**). In the tab under **Secure Sockets when Sending** select **Required, Alternate Port**. This sets the Port for SMTP to **465**.
9. **Incoming Mail** tab is used to set the **SSL** options for receiving mail (**POP**). In the tab under **Secure Sockets when Sending** select **Required, Alternate Port**. This sets the Port for SMTP to **995**.
10. Click **OK**
